Streamline Direct

Streamline Direct lighting distribution in wall or post top configurations for mainly exterior area light applications that require full cutoff optics.

The Streamline direct optical system provides a full cutoff classification in the 0° horizontal head position. The head position is adjustable upward and downward by 15° each way to facilitate other distributions depending on application requirements. Maxi and midi scales are designed for wet location use and feature a sealed optical chamber. The maxi scale units are offered for streetscape applications in both post top and wall mount versions. The midi scale units are similarly offered for post top or wall mount applications with the scale being suited to landscapes rather than streetscapes. The mini scale units are offered in wall mount configurations only.

The post top units feature an integral cast aluminum post top fitter that mates the pole to the luminaire. The ballast is integral to the housing assembly and accessible through a separate gasketed cover plate.

The wall mounted units mount directly to the building surface over a recessed octagonal j-box or horizontally mounted switch box in the case of the mini units (by others). Extended 'U' shaped and 'Z' shaped arm castings provide a unique design element to the Streamline wall mounted units.

Rebelle's full range of eight polyester powder coat finishes are available. RAL and custom color match finishes are also offered.

Design of the Streamline Direct fixtures coordinate seamlessly with the Indirect, Vertical Plane Wash and Architectural Sconce Streamlines.

Detailed information on specific Streamline Direct luminaires can be found on our website.
