Streamline Indirect

Lighting Distribution in Wall Mount Configurations.

The Indirect Streamline is optimized for forward throw ceiling wash applications – rooms that are wider than they are high. Two scales – Midi and Mini – are offered to suit a range of architectural spaces.

Unique to this product is the ability to field adjust the main beam reflector angle to suit spaces that are equally as high as they are wide and spaces that are two times higher than they are wide.

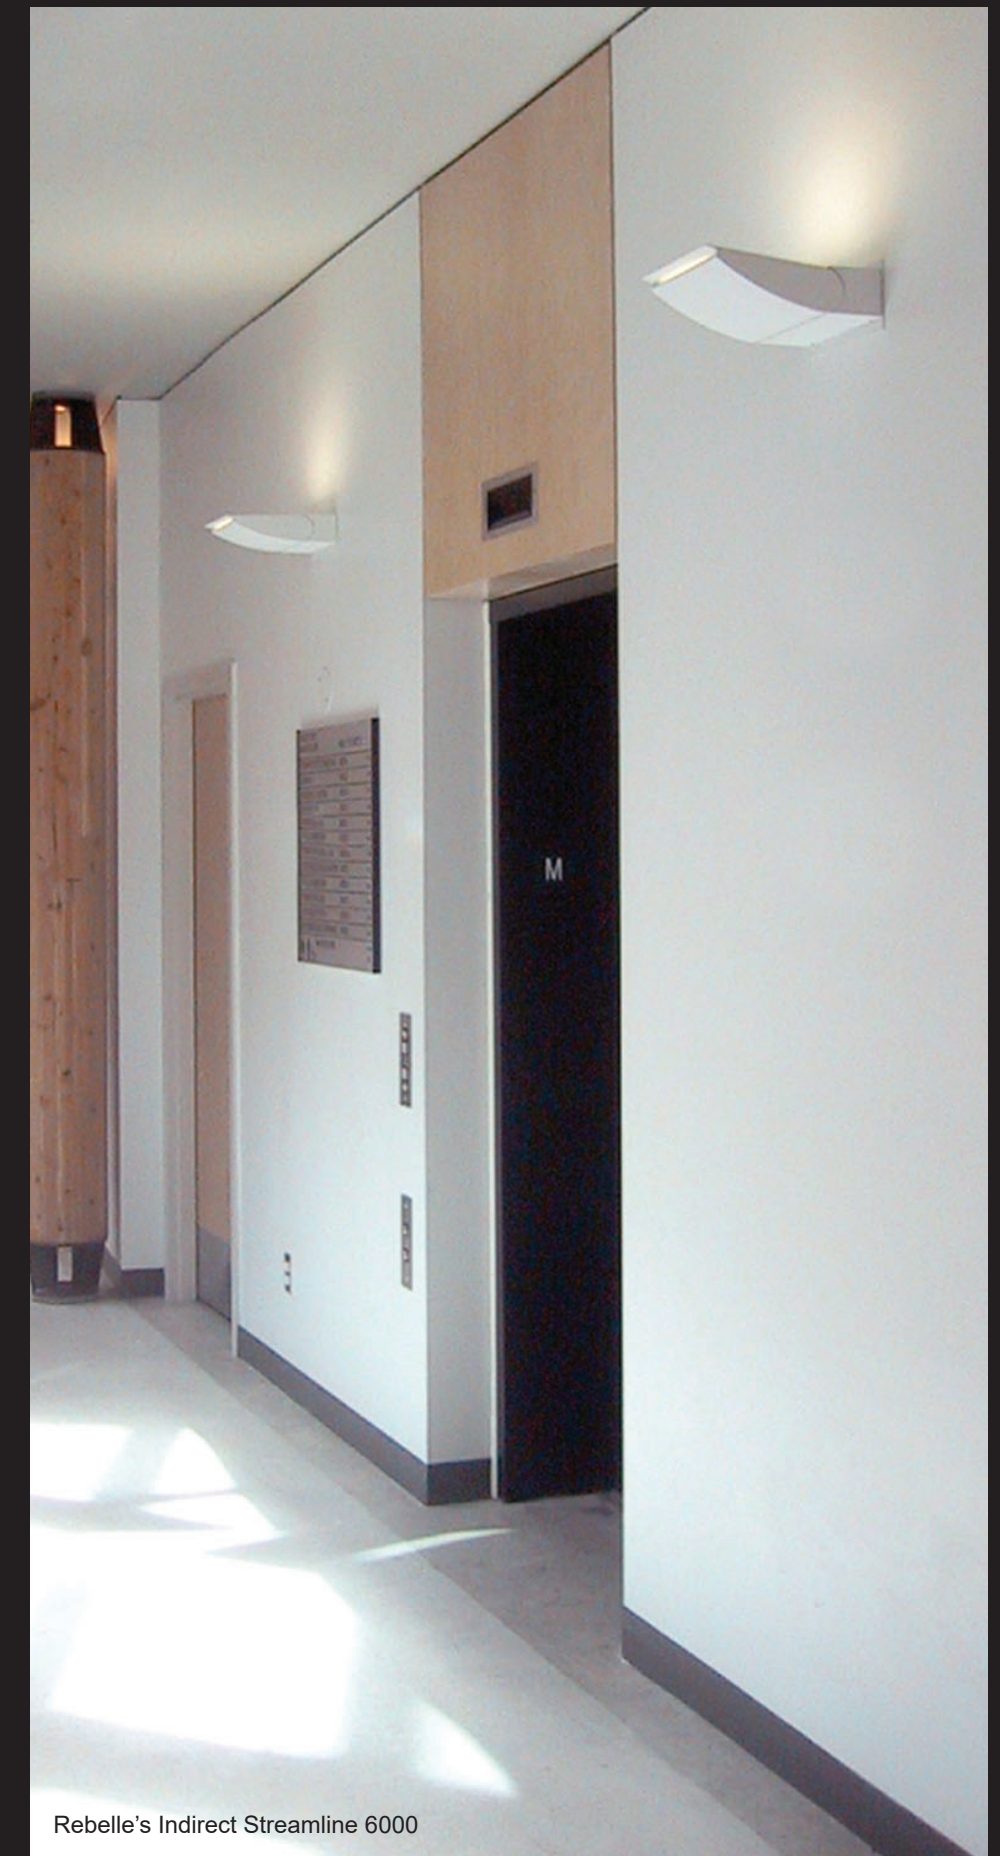

Wall mounted units mount directly over a recessed octagonal j-box or horizontally mounted switch box in the case of the mini units (by others). Extended 'U' shaped and 'Z' shaped arm castings provide a unique design element to the Streamline wall mounted units.

All units are designed for damp locations but units can be optionally supplied for wet location use if needed.

Rebelle's full range of eight polyester powder coat finishes are available. RAL colors and custom color match are also available.

Detailed information on specific Streamline Indirect luminaires can be found on our website.
